Upgrade to new version of database
Quick Start

Follow steps one by one:

1) If services *SOAP Server* and *Alarm Notifier Server* is running, then stop them. (*Database Manager* → *Home* → *Stop* button at every service.

    In case, when the program *Database Manager* is already uninstalled, then it is possible to stop services in the list of Windows services. Right-click on the *Computer* icon and choose *Manage*. Click on *Services* in the tree of tools and find the items *Datalogger Database SOAP Server* and *Datalogger Database Alarm Notifier service* in the list of services. Right-click on them and choose *Stop*.

2) Stop all programs on all computers which are connecting to the database *(Database Viewer, Program for Dataloggers, Program for Monitoring Systems MS)*.

3) Uninstall program *Database Manager*:

    a. *Start* → *Control Panel* → *Program and features (Uninstall or change the program)*

    b. Uninstall the item *Database Manager*

4) Install new version of program *Database Manager*

5) Run *Database Manager* and connect to the database. The program will detect, that the database is of older version and will offer tools for backing up and upgrading only. So follow:

    a. **At first**: Database Back up (the button *Backup* on the tab *Backup*).

    b. **After it**: Upgrade database to new version (button *Upgrade database to the latest version* on the tab *Upgrading*.

6) The database is upgraded now. Don't forget to start services again.

7) Other programs *(Database Viewer, Program for Dataloggers, Program for Monitoring Systems MS)* will not be able to connect to the database since now, because the database is of newer version. Therefore uninstall all programs on all computers and install their actual versions.
